Conversion between cartesian and polar coordinates

$$x = r\cos\theta$$

$$y = r \sin \theta$$

$$y = r\sin\theta \qquad \qquad x^2 + y^2 = r^2$$

Eccentricity

Let F be a fixed point (called the focus) and l be a fixed line (called the directrix) in a plane. Let e be a fixed positive number (called the eccentricity). The set of all points P in the plane such that

$$e = \frac{|PF|}{|Pl|}$$

(that is, the ratio of the distance from F to the distance from I is the constant *e*) is a conic section. The conic is

$$e = 1$$

Polar equation of the conic section

The polar equation of the conic section is

$$r = \frac{ed}{1 \pm e \cos \theta}$$

or
$$r = \frac{ed}{1 \pm e \sin \theta}$$
